

Artificial Intelligence

Public statement — 01/09/2026 — Blanboz Limited

Our approach

At Blanboz we use artificial intelligence (AI) to augment the expertise of our teams, never to replace it. AI enhances our ability to draw insights from complex information, but the expertise, judgement and accountability behind every deliverable remain with our consultants.

Our commitments

- **Human accountability:** AI assists, it does not decide. Every analysis, report or recommendation is reviewed and approved by a Blanboz professional, who answers for its content.
- **Transparency:** We are open with our clients about how we use AI in their work and we answer any question about it.
- **Data protection and confidentiality:** We are committed to protecting the confidentiality, integrity and security of the information entrusted to us. We use approved enterprise-grade AI platforms within appropriate governance and security frameworks, and all processing of confidential or personal information remains subject to our contractual obligations, information security controls, and applicable data protection legislation, including the UK GDPR and Data Protection Act 2018.
- **Quality and verification:** No AI-generated output reaches a deliverable without being checked against reliable sources and against the judgement of our specialists.
- **Ethics and non-discrimination:** We do not use AI to assess people, or in any way that could produce unfair or discriminatory outcomes.
- **Responsible innovation:** We encourage the adoption and development of AI capabilities wherever these improve client outcomes, operational efficiency and technical excellence, always within this framework.

How we govern this

These commitments are set out in our internal artificial intelligence policy, aligned with ISO/IEC 42001 (AI management systems) and embedded in our management system. Management authorises the permitted platforms, the team is trained in the responsible use of AI, and the policy is reviewed at least once a year.
